

ABSTRACT OF THE DISCLOSURE

An offset utility holding device configured to be attached to a cargo rack of a vehicle and to carry elongated objects includes a support base for attachment to a cargo rack of a vehicle, an offset mounting stem extending upwardly from the support base at an incline, and a holding member disposed atop the offset mounting stem. The holding member includes a "U"-shaped containment area having two upright arms which are open at the top for receiving an elongate object therein. The offset mounting stem places the holding member away from a cargo space directly above the cargo rack, such that the elongate object does not interfere with the cargo space.
